SESSION 2018/2019**

COURSE NAME : REAL ESTATE ECONOMICS
COURSE CODE : BPE 23503
PROGRAMME : BPD
EXAMINATION DATE : JUNE / JULY 2019
DURATION : 3 HOURS
INSTRUCTION : ANSWER ALL QUESTIONS

THIS QUESTION PAPER CONSISTS OF **THREE (3)** PAGES

TERBUKA
CONFIDENTIAL

- Q1** (a) Discuss property cycle. (5 marks)
- (b) Explain using diagram the relationship between business cycle and property cycle. (20 marks)

Q2 A “GOLDEN triangle” is synonymous with an area noted for its economic success, prosperity and influence, among others, and reflects the growth of a city. Shah Alam, which is the capital city of Selangor, could very well be the next golden triangle as it has all the ingredients to be successful. Being the first planned city since Malaysia’s independence and the first city in the country to use a centralised sewage system and underground utility cables, Shah Alam’s pioneering moves over the years have seen it emerge from the shadows of its faster-growing neighbours to become a vibrant area as that has attracted property buyers and developers alike. Due to its status as the state capital, Shah Alam, including i-City, is blessed with excellent infrastructure and connectivity, such as highways and roads, which links it to seaports and airports, as well as keep it within a 30-minute driving distance from all other areas in the Klang Valley.

The number of highways connecting i-City to the rest of urban Klang Valley attests to its strategic location at the heart of Selangor’s golden triangle. Public transportation needs are also catered to, with the light rail transit (LRT) network from Bandar Utama to Klang having a station in i-City. Property valuers said i-City, which is the biggest integrated development in Shah Alam that is linked to an LRT is fast shaping to be the heart of Selangor’s golden triangle. I-City would definitely lift up the image of Shah Alam and the overall Selangor as it further progresses, he told NST Property.

- (a) Analyse **FOUR (4)** roles of urban transport planning to achieve highest and best use of land. (10 marks)
- (b) Justify by giving example on various macro and micro strategies affecting urban land market due to inefficient urban transport planning in Malaysia. (15 marks)
- Q3** Land values and land use are highly affected by the institution, legislative and other constraints.
- (a) Examine **FOUR (4)** implications of the above to real estate development. (10 marks)

- (b) Analyse the main characteristics of real property interest which increase higher yield for real estate investment.

(15 marks)

Q4 Urban regeneration is not simply tidying up derelict land. It has to rebuild communities by providing them with jobs and decent living conditions, by attracting investment from the private sector. As a result, urban regeneration had to be coordinated with regional policy.

- (a) Discuss the above statement with examples on the various schemes to attract investment.

(10 marks)

- (b) Analyse by giving examples on various land management principle approaches to be adopted in the urban regeneration projects in Malaysia.

(15 marks)
