

UNIVERSITI TUN HUSSEIN ONN MALAYSIA

**FINAL EXAMINATION
SEMESTER I
SESSION 2015/2016**

COURSE NAME : HYDRAULICS
COURSE CODE : DAC 21003
PROGRAMME : 2 DAA
EXAMINATION DATE : DECEMBER 2015 /
JANUARY 2016
DURATION : 3 HOURS
INSTRUCTION : ANSWER **FIVE (5)** QUESTIONS
ONLY

THIS QUESTION PAPER CONSISTS OF **SIX (6)** PAGES

- Q1** (a) Define **two (2)** differences between hydrostatic pressure and atmospheric pressure. (4 marks)
- (b) Explain about Pascal's principle. (4 marks)
- (c) Determine the pressure (in N/m^2) at 40 m depth below water surface inside a reservoir. (3 marks)
- (d) Refer **Figure Q1(d)**, determine absolute pressure of four different fluid inside a glass container. ($P_{\text{atm}} = 102 \text{ kPa}$) (9 marks)
- Q2** (a) Describe about centre of pressure. (4 marks)
- (b) Sketch the hydrostatic force on horizontal submerged plane surface. (4 marks)
- (c) Refer **Figure Q2(c)**, 10 m width rectangular gate that leans against the floor with an angle 45° . Analyze the minimum force required to open the water gate. (12 marks)
- Q3** (a) Sketch the types of water flow as below:
- (i) Steady flow (2 marks)
- (ii) Uniform flow (1 mark)
- (iii) Non uniform flow (1 mark)
- (b) Identify **two (2)** differences between gradually varied flow and rapidly varied flow. (4 marks)
- (c) Determine the velocity from 9 mm nozzle attached to the 36 mm diameter pipe has a velocity of 1.5 m/s. (4 marks)

(d) A 450 mm diameter pipe has velocity of Tetrachloride Carbon (density = 1500 kg/m^3) which is 2.4 m/s. Calculate the discharge in different unit as below:

(i) kg/hour

(2 marks)

(ii) ml/min

(2 marks)

(iii) m^3/s

(2 marks)

(iv) Gallon/day

(2 marks)

Q4 (a) Describe about flow, kinetic, potential and total energy in fluid flow.

(4 marks)

(b) Identify **four (4)** principles of Bernoulli's equation.

(4 marks)

(c) Refer **Figure Q4(c)**, the specific weight of air is 12.7 N/m^3 and Benzene in the manometer has specific gravity = 0.88. Determine the flow rate in the venturi meter by neglecting losses. (Diameter pipe 1 = 200 mm and diameter pipe 2 = 100 mm)

(12 marks)

Q5 (a) Define **two (2)** differences between laminar and turbulent flow.

(4 marks)

(b) Explain about friction in pipe.

(4 marks)

(c) Analyze the head loss of a raw oil (specific gravity = 0.856, viscosity = $7.2 \times 10^{-3} \text{ Ns/m}^2$) due to friction which flowing through a 135 m long pipe. The velocity is 3 m/s and pipe radius is 225 mm.

(6 marks)

(d) Measure total discharge of parallel pipe system which length of pipe A is 20 m with discharge in pipe 2 is $2 \text{ m}^3/\text{s}$ and length of pipe B is 5 m. Both pipe has a same diameter with friction factor is 0.01. Minor losses are neglected.

(6 marks)

- Q6** (a) Compare the characteristics between suppressed crested weir and contracted crested weir. (4 marks)
- (b) Sketch **two (2)** artificial channels. (2 marks)
- (c) Explain about pump as a hydraulic machine. (2 marks)
- (d) Analyze the head in centimeters for the discharge over a triangular notch weir is to be 127.5 l/s. If V- notch is having angle of 40° . Take coefficient of discharge as 0.65. (4 marks)
- (e) Refer **Figure Q6(e)**, determine the hydraulic radius. (4 marks)
- (f) A centrifugal pump is needed to supply $69 \text{ m}^3/\text{s}$ of water for a city. This operation will utilise a net head (H) of 60 m with a specific speed N of 1,350 rpm. Given that the inflow power is 15 MW, calculate as below:
- (i) Outflow power, P_d (2 marks)
- (ii) Overall efficiency, η_o (2 marks)

- END OF QUESTIONS-

FINAL EXAMINATION
