**UNIVERSITI TUN HUSSEIN ONN MALAYSIA**

**FINAL EXAMINATION  
(TAKE HOME)  
SEMESTER II  
SESSION 2019/2020**

COURSE NAME : ENGINEERING ECONOMY  
COURSE CODE : BPK 30902 / BFC 44602 / BDA 40902  
PROGRAMME CODE : BFF/BDD/BNB/BNA/BDC/BDM  
EXAMINATION DATE : JULY 2020  
DURATION : 24 HOURS  
INSTRUCTION : ANSWER ALL QUESTIONS  
OPEN BOOK EXAMINATION

THIS QUESTION PAPER CONSISTS OF SEVEN (7) PAGES

**CONFIDENTIAL**

**TERBUKA**

**Q1 (a)** Identify each of the following cash items whether it is fixed cost, variable cost, sunk cost, or opportunity cost.

(i) Total of RM25,000 income forgone by an engineering student that choose to further their study  
(1 mark)

(ii) RM4000 monthly rental cost for a site office and the equipments.  
(1 mark)

(iii) The cost of RM10 000 for land acquisition of building a water tank with two options of materials  
(1 mark)

(iv) Total cost of RM245,000 for labours and materials in the construction site.  
(1 mark)

(b) JohorBina is a contractor company specialise in bridge construction. The company has been offered two projects to construct a bridge at two different locations. However, based on the capability of the company, the company is only able to accept one project at a time. To make the decision, cost estimation has to be conducted first. The cost factors relating to the two projects are shown in **Table Q1(b)**.

The design phase for both projects will take 3 months and the construction phase will take 9 months. Thus total of 12 months are required to complete the project (With 6 working days per week and 8 working hours per day). The volume for each beam and column are 500m<sup>3</sup> and 314m<sup>3</sup> respectively. The cost of concrete is RM65 per unit volume. The revenue for the bridge construction comes from the toll payment by the users of the bridge. The fees for each automobile that passes through the bridge is RM1.10 per automobile on average. The average number of automobile passes through the bridge is 60 000 per year.

**Table Q1(b): Cost Factors**

<b>Cost Factors</b>	<b>Project A</b>	<b>Project B</b>
Concrete beams and columns needed	6 beams, 12 columns	8 beams, 16 columns
Equipment rental (per month)	RM1000	RM2500
Site investigation	RM40636	RM30848
Labour cost:		
(i) Design engineer	RM150 per hour	RM130 per hour
(ii) Field/construction engineer	RM100 per hour	RM90 per hour

(i) Calculate the cost of material for each project.  
(4 marks)

- (ii) Calculate the cost of labour for each project (8 marks)
- (iii) Compute the total cost for both projects (6 marks)
- (iv) Select the best option based on the cost analysis approach. (3 marks)

**Q2**

Precast Manufacturing Sdn. Bhd launches a new precast concrete product. The information on their product is shown in **Table Q2**. Their competitor, Mega Jaya Sdn. Bhd. offers a similar product at RM 2,500 per unit. An 87% learning curve applies to the labour required and it take 12 hours to complete the first unit. For cost estimation purposes, Precast Manufacturing Sdn. Bhd. decides to use time for completing the 15th unit as a standard. The profit margin is based on total manufacturing costs.

**Table Q2: Information of Product Cost**

Directory labour cost	RM 65.00/ hour
Factory overhead	115 % of direct labour
Production materials	RM 1115/unit

- a) Determine the maximum profit margin that Precast Manufacturing Sdn. Bhd. can have to remain competitive. (12 marks)
- b) Compute the number of units that must be sold to achieve a profit of RM 45,000 if the selling price of product is RM 2750. (6 marks)
- c) Determine the cumulative average hours required for the first fifteen units. (7 marks)

**Q3 (a)**

Farid intend to set up a construction firm in 10 years time. He needs RM75,000 as a start-up and RM75,000 yearly for administration expenses. Farid plans to use his own money from his job as a technician at a private company by saving some amount of his salary into an account.

- (i) Compute the set-up cost of Farid's construction firm in ten years period. (6 Marks)

(ii) Farid plans to save in an account with Tabung Haji that pays 6% compounded annually. Compute the amount that he has to save annually for 10 years to fulfill his dream.

(6 Marks)

(iii) If Farid's monthly income is RM2000 per month and remain the same for 10 years. Explain whether his plan to have his own contractor firm would become a reality.

(3 Marks)

(b) Farid has finally opened up his contractor firm and his business is doing excellently successful. He is currently having 10 different branches all over Malaysia. At the age of 50, he started to think about his retirement plan and would like to open a special account to cater for his retirement. He opens another account in Tabung Haji and deposited an amount of RM 200,000 as his opening balance. He plans to save up to RM22,000 per year into his second account in Tabung Haji.

Calculate the amount of money he will have saved when he is 65 years old, after 15 years of savings with the interest rate of 7% per year.

(10 Marks)

**Q4** (a) Identify each of the following cash flow to indicate whether it is a benefit, a disbenefit, or a cost.

(i) Lost of income to local business because of a new freeway.

(1 mark)

(ii) Less travel time because of a loop bypass.

(1 mark)

(iii) RM 40,000 annual income to local businesses because of tourism created by a national park.

(1 mark)

(iv) Cost of fish from a hatchery to stock a lake at the state park

(1 mark)

(b) The cost of grading and spreading gravel on a short rural road is expected to be RM 300,000. The road will have to be maintained at a cost of RM 25,000 per year. Even though the new road is not very smooth, it allows access to an area that previously could only be reached with off-road vehicles. The improved accessibility has led to a 150% increase in the property values along the road.

**TERBUKA**

- (i) Calculate the conventional B/C ratio with PW using an interest rate of 6% per year and a 20-year study period if the previous market value of a property was RM 900,000. (8 marks)
- (ii) Justify whether the project should be proceeded or not. (2 marks)
- (c) A new piece of equipment has been proposed by Alunad Consultant to upgrade the water quality at ABC Camp Site. The investment cost is RM 35,000 with salvage value of RM 3,000 after 4 years. The revenue generated from the installation of the equipment minus the operating and maintenance cost of the equipment is RM6,500 per year. If the MARR is 15% per year, is this equipment deserve to be installed. Use the Future Worth (FW) method for your answer. Cash flow diagram should be included in your answer. (8 marks)
- (d) (i) Mutlu Construction Works has been offered a tender to install an escalator in MARA Building at Kulai, Johor. The company has two alternatives with details as shown in the **Table Q4(b)**. Choose the best alternative for the company using Present Worth (PW) method if the interest is 12% compounded quarterly. Your answer should include cash flow diagrams for each alternative and solved by either the formula or table.

**Table 4Q(d): Alternatives of Investment**

Information	Alternative X (RM)	Alternative Y (RM)
First Cost	55000	85000
Operational Cost (every 3 months)	15000	3000
Salvage Value	5000	8500
Lifetime, year	2	4

(12 marks)

- (ii) Based on your answer, which alternative should be selected? Give your rationale for the choice. (3 marks)

- END OF QUESTIONS -

**FINAL EXAMINATION**

SEMESTER/SESSION: SEM /2019/2020  
 COURSE NAME : ENGINEERING ECONOMY

PROGRAMME. BFF  
 COURSE CODE: BFC 44602/BPK 30902

**LIST OF FORMULA**

1.  $p(1+i)^n$
2.  $C_n - C_k (I_n/I_k)$
3.  $Z_u = K(I^n)$
4.  $n = \log s / \log 2$
5.  $I_n = \frac{W1 (C_{n1}/C_{k2}) + W2 (C_{n2}/C_{k2}) + W... (C_{n...}/C_{k...})}{W1 + W2 + W...} \times I_k$
6. Conventional B-C ratio with PW  
 $B-C = PW(B) \div [(I - PW(MV)) + PW(O\&M)]$
7. Modified B-C ratio with PW  
 $B-C = [PW(B) - PW(O\&M)] \div [I - PW(MV)]$
8. Conventional B-C ratio with AW  
 $B-C = AW(B) \div [CR + AW(O\&M)]$
9. Modified B C ratio with AW  
 $B-C = [AW(B) - AW(O\&M)] \div CR$

**LIST OF DISCRETE COMPOUNDING**
