

**UNIVERSITI TUN HUSSEIN ONN MALAYSIA**

**FINAL EXAMINATION  
(TAKE HOME)  
SEMESTER I  
SESSION 2020/2021**

COURSE NAME : SIGNALS AND SYSTEMS  
COURSE CODE : BNF36002/BNR36103  
PROGRAMME CODE : BNF  
EXAMINATION DATE : JANUARY / FEBRUARY 2021  
DURATION : 2 HOURS  
INSTRUCTION : ANSWER ALL QUESTIONS  
OPEN BOOK EXAMINATION

**TERBUKA**

THIS QUESTION PAPER CONSISTS OF FOUR (4) PAGES

**Q1** (a) Sketch the output of the following functions. Label your sketches carefully.

(i)  $y(t) = (\sin t) \cdot u(t - \pi)$  (3 marks)

(ii)  $y(t) = t^2 \cdot u(t - 2)$  (3 marks)

(iii)  $y(t) = u(t + 2) - u(t + 1) + u(t - 1)$  (3 marks)

(b) Given  $w(t) = \sum_{-\infty}^{\infty} P(t - 6k)$ , fundamental period  $T_o = 6s$ , analyze the energy and power signals depicted in the **Figure Q1 (b)**. Identify whether the signal is energy signals or power signals. (7 marks)

(c) Demonstrate whether the following systems are time invariance or not. (Show necessary steps for verification)

(i)  $y(t) = x(4t)$  (3 marks)

(ii)  $y(t) = e^{x(t)}$  (3 marks)

(iii)  $y(t) = t^{2x(t)}$  (3 marks)

**Q2** (a) A system can be classified into several system properties. Describe **SIX (6)** basic system properties. (6 marks)

(b) Consider the parallel combination of two LTI systems shown in **Figure Q2 (b)**. The impulse responses of the systems are as follow:

$$h_1(t) = 2\delta(t + 2) - 3\delta(t + 1)$$

$$h_2(t) = \delta(t - 2)$$

If the input  $x(t)$  is a unit step signal, evaluate the output waveform  $y(t)$ . Construct the output waveform based on your answer. (8 marks)

(c) Determine the Fourier series of the waveform shown in **Figure Q2 (c)** and illustrate the amplitude and phase spectra. (11 marks)

**TERBUKA**

- Q3 (a) Compute the coefficients  $a_k$  using Fourier series analysis equation for the continuous-time periodic signal

$$x(t) = \begin{cases} 1.5 & 0 < t < 1 \\ -1.5 & 1 < t < 2 \end{cases}$$

With the fundamental frequency  $\omega_0 = \pi$

$$\text{Fourier series analysis equation } a_k = \frac{1}{T} \int_I x(t) e^{-jk\omega_0 t} dt$$

(7 marks)

- (b) Determine the Fourier Transform of the following signals

(i)  $x(t) = \sin\omega_0 t$

(9 marks)

(ii)  $x(t) = 2e^{-\frac{t}{2}}u(t)$

(9 marks)

- Q4 (a) Explain briefly the differences between Fourier Transform and Laplace Transform (5 marks)

- (b) Laplace transform converts the equation of mathematical model from t-(time) domain into s-(frequency) domain and Inverse Laplace Transform is vice versa. By using the definition, solve the following equations:

(i)  $h(t) = (t - 2)^2 u(t - 2)$

(4 marks)

(ii)  $l(s) = \frac{s^2}{s^2 + 5s + 6}$

(4 marks)

- (c) Given the following differential equations, analyze the system by obtaining the response  $y(t)$  subject to the given initial condition.

(i)  $\frac{dy}{dt} + 2y = 12$  where  $y(0) = 10$

(6 marks)

(ii)  $y'' + 3y' + 2y = 0$  where  $y(0) = 0.1$  and  $y'(0) = 0.05$

(6 marks)
