

CONFIDENTIAL

UNIVERSITI TUN HUSSEIN ONN MALAYSIA

**FINAL EXAMINATION
(TAKE- HOME)
SEMESTER II
SESSION 2020/2021**

COURSE NAME : DIGITAL SIGNAL PROCESSING
COURSE CODE : BEJ 30603/BEB 30503/BEV 30603
PROGRAMME CODE : BEJ / BEV
EXAMINATION DATE : JULY 2021
DURATION : 4 HOURS
INSTRUCTION : ANSWERS ALL QUESTIONS.
OPEN BOOK EXAMINATION

THIS QUESTION PAPER CONSISTS OF **THREE (3)** PAGES

CONFIDENTIAL

TERBUKA

Please download an excel file of signal ($x[n]$ for **Q1** and the signal $b[n]$ for **Q2**) from your individual folder in the *Individual activities* of *AUTHOR* platform.

- Q1** Given a discrete signal, $x[n]$ is measured from a sensor. In order to process the signal, a system has been developed and is as shown in **Figure Q1**. Calculate the output signal $y[n]$ of the system, if the system is characterized as :

$$a[n] = u[n + 5] - u[n] - 2\delta[n] + 2\delta[n - 1] \quad (20 \text{ marks})$$

- Q2** An engineer has generated a discrete signal, $b[n]$ to be fed to a communication module with the sampling frequency of 10 Hz.

- (i) Estimate the magnitude spectrum of the signal. (31 marks)

- (ii) Filter the lowest frequency component of signal using IIR filter based on direct analog-to-digital transformation method. Please prove the filtering effect of the designed filter. Use 10 samples for your answer. (49 marks)

You must use four decimal points in your calculation.
