

**UTHM**  
Universiti Tun Hussein Onn Malaysia

**UNIVERSITI TUN HUSSEIN ONN MALAYSIA**

**FINAL EXAMINATION  
SEMESTER II  
SESSION 2021/2022**

- COURSE NAME : ENGINEERING MECHANICS
- COURSE CODE : BDX 10603
- PROGRAMME CODE : BDX
- EXAMINATION DATE: JULY 2022
- DURATION : 3 HOURS
- INSTRUCTIONS :
1. ANSWER **FIVE (5)** QUESTIONS **ONLY** FROM **SIX (6)** QUESTIONS GIVEN
  2. THIS FINAL EXAMINATION IS CONDUCTED VIA ~~OPEN~~ / **CLOSE** BOOK
  3. STUDENTS ARE **PROHIBITED** TO CONSULT THEIR OWN MATERIAL OR ANY EXTERNAL RESOURCES DURING THE EXAMINATION CONDUCTED VIA CLOSE BOOK

THIS QUESTION PAPER CONSISTS OF **SIX (6)** PAGES

CONFIDENTIAL

**TERBUKA**

**Q1.** Figure Q1 shows a gear rotating about an axis

- (a) When the gear rotates 20 revolutions, it achieves an angular velocity of  $v = 30$  rad/s, starting from rest. Determine its constant angular acceleration and the time required.

(10 marks)

- (b) The gear rotates with an angular velocity of  $v = (0.005\theta^2)$  rad/s, where  $\theta$  is in radians. Determine the angular acceleration when it has rotated 20 revolutions.

(10 marks)

**Q2** If crank OA (**Figure Q2**) rotates with an angular velocity of  $v = 12$  rad/s,

- (a) Calculate the velocity of piston B

(13 marks)

- (b) Calculate angular velocity of rod AB at the instant shown

(7 marks)

**Q3** The 75-lb block is released from rest 5 ft above the plate as shown in **Figure Q3**. By neglecting the mass of the plate,

- (a) Evaluate the compression of each spring A and C when the block momentarily comes to rest after striking the plate.

(16 marks)

- (b) Calculate the compression of spring B

(4 marks)

**Q4** The 2.5-Mg four-wheel-drive SUV tows the 1.5-Mg trailer as shown in **Figure Q4**. The traction force developed at the wheels is  $FD = 9$  kN, By neglecting the mass of the wheels,

- (a) Determine the speed of the truck in 20 s, starting from rest

(10 marks)

- (b) Determine the tension developed in the coupling, A, between the SUV and the trailer

(10 marks)

- Q5** (a) In **Figure Q5 (a)**, calculate the angular velocity of the rod and the velocity of point C at the instant shown.

(5 marks)

- (b) If cable AB is unwound with a speed of 3 m/s (**Figure Q5(b)**), and the gear rack C has a speed of 1.5 m/s, determine the angular velocity of the gear and the velocity of its center O.

(15 marks)

- Q6** (a) From **Figure Q6**, determine the reaction force at position A and F of the structure. the force in members ED

(5 marks)

- (b) Examine the force in members ED, EH, and GH of the truss, whether the members are in tension or compression in **Figure Q6**.

(15 marks)

-END OF QUESTION-
