

**CONFIDENTIAL**

**UNIVERSITI TUN HUSSEIN ONN MALAYSIA**

**FINAL EXAMINATION  
SEMESTER I  
SESSION 2022/2023**

COURSE NAME : ELECTRICAL INSTRUMENTATION AND MEASUREMENT

COURSE CODE : DAE 21403

PROGRAMME CODE : DAE

EXAMINATION DATE : FEBRUARY 2023

DURATION : 3 HOURS

INSTRUCTION : 1. ANSWER **ALL** QUESTIONS.  
2. THIS FINAL EXAMINATION IS CONDUCTED VIA **CLOSED BOOK**.  
3. STUDENTS ARE **PROHIBITED** TO CONSULT THEIR OWN MATERIAL OR ANY EXTERNAL RESOURCES DURING THE EXAMINATION CONDUCTED VIA CLOSED BOOK.

THIS QUESTION PAPER CONSISTS OF **ELEVEN (11)** PAGES

**TERBUKA**

**CONFIDENTIAL**

**SECTION A (40 MARKS)**

- Q1** Select the **non-fundamental** unit of International Standard.
- A. Kilogram (kg)
  - B. Millimeter (mm)
  - C. Candela (cd)
  - D. Ampere (A)
- Q2** Physical quantity of measurement system is best described as:
- A. Properties of material or system that can be express as value.
  - B. Data that represent the fundamental value of SI unit.
  - C. Measurable data attained from instrumentation.
  - D. Representation of measured data.
- Q3** Resistance colour code depicted in the resistance band is a method of describing the resistance value and its tolerance. The range of resistance value is also known as:
- A. Relative Error.
  - B. Absolute Error.
  - C. Guaranteed Error.
  - D. Random Error.
- Q4** Zero-ohm adjustment in a multimeter is to:
- A. reduce gross error.
  - B. eliminate error due to battery variation.
  - C. adjust the sensitivity of the coil due to variation of range selected.
  - D. ensure the continuity test measures the lowest resistance possible.
- Q5** Which of the listed statement in **incorrect**?
- A. Full-scale deflection reading has the least error.
  - B. Full-scale current at moving coil is direct proportional to percentage of deflection.
  - C. Full-scale deflection is always referred to maximum range of the measurement scale.
  - D. Full-scale deflection resulted from maximum current flowing thru moving coil.
- Q6** The **best** description of parallax error is:
- A. The error of reading the measurement data.
  - B. The uncertain position of pointer sitting on the scale.
  - C. The positional degree of the observer eye.
  - D. The uncertainty about the eye of the observer being directly in line with the end of the pointer.
- Q7** What is meant by the term precision?
- A. The overall quality of data.
  - B. The lack of bias in the data.
  - C. The extent to which a value approaches its true value.
  - D. The level of detail at which data is stored.

- Q8 What is meant by the term accuracy?
- A. The lack of bias in the data.
  - B. The overall quality of the data.
  - C. The level of detail at which data is stored.
  - D. The extent to which a value approaches its true value.
- Q9 Looking at the rifle target below, how would you describe the shooting of this contestant?

- A. Inaccurate and imprecise.
  - B. Accurate and imprecise.
  - C. Accurate and precise.
  - D. Inaccurate and precise.
- Q10 The difference between the measured value and true value is described as:
- A. Relative error.
  - B. Absolute error.
  - C. Gross error.
  - D. Probable error.
- Q11 Systematic error can be defined as:
- A. Instrumental error.
  - B. Environmental error.
  - C. Random error.
  - D. Instrumental and environmental error.
- Q12 Relative error can be defined as:
- A. Difference of the measured value and the true value.
  - B. Ratio of absolute error to the measured value of the quantity under measurement.
  - C. Ratio of absolute error to the true value of the quantity under measurement.
  - D. Ratio of the probable error to the true value of quantity under measurement.
- Q13 To increase the range of ammeter, connect:
- A. a high value resistance in series with the ammeter coil.
  - B. a high value resistance in parallel with the ammeter coil.
  - C. a low value resistance in parallel with the ammeter coil.
  - D. a low value resistance in series with the ammeter coil.
- Q14 The number 0.032040 has \_\_\_ significant figures.
- A. 3
  - B. 5
  - C. 6
  - D. 7

- Q15** The function of shunt in an ammeter is to:
- A. Bypass the current.
  - B. Increase the sensitivity of the ammeter.
  - C. Increase the resistance of the ammeter.
  - D. None of the above.
- Q16** What are the main criteria of a balanced Wheatstone bridge?
- A. Resistance across each arm must be equal.
  - B. No current flow through the null detector.
  - C. Measured resistance must be lower than 1 ohm.
  - D. Voltage in each resistor must be equal.
- Q17** What are the criteria for a balanced Kelvin bridge?
- A. Resistance across each arm must be equal.
  - B. No current flow through the null detector.
  - C. Measured resistance must be higher than 1 ohm.
  - D. Voltage in each resistor must be equal.
- Q18** What is the significant difference between Wheatstone and Kelvin bridge?
- A. Wheatstone bridge able to measure much lower resistance in contrast with Kelvin bridge.
  - B. Wheatstone bridge has higher accuracy compared to Kelvin bridge.
  - C. Wheatstone bridge can be implemented to more measurement application.
  - D. Kelvin bridge is having higher error margin.
- Q19** Which is the following standard is used as the main reference in controlling the quality of manufacturing goods for the industry.
- A. International Standard.
  - B. Primary Standard.
  - C. Secondary Standard.
  - D. Working Standard.
- Q20** The significant of Working Standard as the main reference in industry is as follows **except** for:
- A. Easier for employee training.
  - B. Reduce variability in the output.
  - C. Less requirement needed for calibration.
  - D. Continuous improvement of the standard.
- Q21** Measurement is best recorded at nearly full-scale deflection. Select the **best** reason why this practice is necessary.
- A. To protect the instrument.
  - B. To get the least measurement error possible.
  - C. The scale is more precise at near full scale.
  - D. To ensure maximum current is applied during measurement.

- Q22** During current measurement of unknown value, the ammeter range is best positioned at the highest range. Why this procedure is crucial for an analog ammeter?
- A. To protect the ammeter.
  - B. To get full-scale deflection.
  - C. To get the least measurement error possible.
  - D. To reduce insertion effect.
- Q23** Select the statement which is **incorrect** regarding AC bridge.
- A. The measurement can be carried out by AC bridge is more diverse compared to DC bridge.
  - B. Require warmer earth device to ensure measurement is accurate.
  - C. Balancing time is comparatively high due to the complexity of the circuitry.
  - D. Element in the bridge arms can be either resistive or reactive.
- Q24** A balance condition in an AC bridge should have this condition, **except**:
- A. Product of the magnitudes of the opposite arms are equal.
  - B. Product of phase angles of the opposite arms are equal.
  - C. Sum of phase angles of the opposite arms equal.
  - D. AC current across the bridge is null.
- Q25** Select the control panel in an oscilloscope that control the graticule (horizontal and vertical lines).
- A. Display Control.
  - B. Vertical Control.
  - C. Horizontal Control.
  - D. Trigger Control.
- Q26** Which of this control panel controls the time base of graph plotted on the oscilloscope?
- A. Display Control.
  - B. Vertical Control.
  - C. Horizontal Control.
  - D. Trigger Control.
- Q27** Which of this control panel controls the voltage amplitude of graph plotted on the oscilloscope?
- A. Display Control.
  - B. Vertical Control.
  - C. Horizontal Control.
  - D. Trigger Control.
- Q28** Oscilloscope can be used to measure all the items below, **except**:
- A. AC voltage.
  - B. DC current.
  - C. Time period.
  - D. Phase shift.

- Q29** Why probe of the oscilloscope needs to be calibrated?
- A. To acquire accurate time measurement.
  - B. To acquire accurate voltage measurement.
  - C. To eliminate waveform distortion at higher frequencies.
  - D. To eliminate waveform distortion at lower frequencies.

- Q30** Referring to the figure below, calculate the duty cycle of the waveform.

- A. 12%
  - B. 16.67%
  - C. 20%
  - D. 80%
- Q31** What is a periodic signal?
- A. A repetitive signal overtime.
  - B. A signal that displayed the same shape.
  - C. A measurable signal.
  - D. None of the above.
- Q32** Select the **incorrect** statement.
- A. Lissajous pattern can be used to measure frequency.
  - B. Lissajous pattern can be used to compare two frequencies of the same waveform.
  - C. Lissajous pattern can be used to calculate phase different between two signals of the same frequency.
  - D. Lissajous pattern can be used to calculate phase different between two signals of the different frequency.
- Q33** What is a transducer?
- A. Convert electrical signal into a displacement.
  - B. Convert one form of energy into electrical signal.
  - C. A movement of signal that can be measured.
  - D. A form of sensor.
- Q34** A transducer should have this following requirement, **except** for:
- A. Ruggedness.
  - B. High output of signal quality.
  - C. Precise.
  - D. None of the above.

- Q35** What is an actuator?  
A. Convert electrical signal into a displacement.  
B. Convert one form of energy into electrical signal.  
C. A linear mechanical motion device.  
D. A form of sensor.
- Q36** All of this sensor is categorised as a light sensor, **except**:  
A. Photovoltaic cell.  
B. Light dependent resistor.  
C. Infrared sensor.  
D. Photodiode.
- Q37** A thermal sensor which is constructed using two different metal is called:  
A. PTC.  
B. NTC.  
C. Thermocouple.  
D. RTD.
- Q38** A type of resistor whose electrical resistance varies with changes in temperature is known as:  
A. RTD.  
B. Thermistor.  
C. NTC.  
D. PTC.
- Q39** Which of the listed device is **not** categorised as sound transducer?  
A. Microphone.  
B. Loudspeaker.  
C. Ultrasonic sensor.  
D. Walkie talkie.
- Q40** All of this criterion is the beneficial contribution of sensor to human in improving their quality of life, **except**:  
A. Accelerate process.  
B. Data collection.  
C. Increase productivity.  
D. Lower energy usage.

## SECTION B (60 MARKS)

- Q1** (a) List **four (4)** precaution procedures of handling and taking measurement data from a multirange ammeter. (4 marks)
- (b) Based on the **Figure Q1(b)**, a PMMC instruments has three Ayrton shunt resistors connected across it to make an ammeter. The meter has  $R_m = 250 \Omega$ ,  $FSD = 25 \mu A$  and ammeter ranges of  $1.5 A$ ,  $1.0 A$  and  $0.5 A$ .
- (i) Calculate the required values of multiplier resistors ( $R_1$ ,  $R_2$ ,  $R_3$ ) for the given circuit configuration. (6 marks)
- (ii) Determine which selector position is to be place for each ammeter range. (3 marks)
- (iii) Discuss the reason why the selector is placed as such condition in **Q1(b)(ii)**. (3 marks)
- (c) The ohm meter circuit in **Figure Q1(c)** has  $E_b = 3 V$ ,  $R_1 = 1.5 k\Omega$ ,  $R_2 = 25 \Omega$ ,  $R_m = 25 \Omega$  and meter FSD,  $I_m = 1 mA$ . Determine:
- (i) The ohm meter scale reading (value of  $R_x$ ) at  $0.5 FSD$ . (3 marks)
- (ii) The new resistance value of  $R_2$  that must be adjusted to when  $E_b$  falls by 10%. (6 marks)
- (iii) The ohm meter scale reading (value of  $R_x$ ) at  $0.5 FSD$  with new value of  $R_2$  as in **Q1(c)(ii)**. (3 marks)
- (iv) The percentage difference on the scale reading at **Q1(c)(i)** and **Q1(c)(iii)**. (2 marks)

- Q2**
- (a) A transducer needs to be with a high reliability and stability. Discuss why this criterion is important in a transducer. (5 marks)
- (b) Explain **two (2)** significant difference between input and output of sound transducer. (6 marks)
- (c) Based on Wheatstone bridge in **Figure Q2(c)**, the resistive components have following nominal values:  $E = 5\text{ V}$ ,  $R_1 = 1\text{ k}\Omega$ ,  $R_2 = 1\text{ k}\Omega$ ,  $R_3 = 2.5\text{ k}\Omega$  and  $R_g = 10\ \Omega$ .
- (i) Calculate the value of  $R_X$  when  $V_{TH} = 25\text{ mV}$  and  $I_g = 15\ \mu\text{A}$ . (8 marks)
- (ii) The galvanometer has a sensitivity of  $2.0\text{ mm}/\mu\text{A}$ . Determine the galvanometer deflection for the condition in **Q2(c)(i)**. (2 marks)
- (d) Lissajous pattern can be used to estimate phase or frequency different in an electrical circuit. Complete the measurement and estimation given by the Lissajous pattern in **Figure Q2(d)**. (7 marks)
- (e) List **two (2)** application of Kelvin bridge as a measurement device in the industry. (2 marks)
