UNIVERSITI TUN HUSSEIN ONN MALAYSIA

**FINAL EXAMINATION
SEMESTER II
SESSION 2022/2023**

COURSE NAME : ADVANCED STRUCTURAL ANALYSIS

COURSE CODE : BFS 40103

PROGRAMME CODE : BFF

EXAMINATION DATE : JULY / AUGUST 2023

DURATION : 3 HOURS

INSTRUCTION

1. ANSWER ALL QUESTIONS
2. THIS FINAL EXAMINATION IS CONDUCTED VIA **CLOSED BOOK**
3. STUDENTS ARE **PROHIBITED** TO CONSULT THEIR OWN MATERIAL OR ANY EXTERNAL RESOURCES DURING THE EXAMINATION CONDUCTED VIA CLOSED BOOK

THIS QUESTION PAPER CONSISTS OF **FIVE (5)** PAGES

CONFIDENTIAL

TERBUKA

- Q1** (a) Briefly discuss **FOUR (4)** assumptions in yield line analysis. (5 marks)
- (b) A slab depicted in **Figure Q1(b)** has dimensions of 7.5 m x 4.5 m.
Given:
(i) Live load plus self weight of slab = 15 kN/m²
(ii) Dead load of the masonry wall = 3 kN/m
- Determine the resistance moment, m , for the slab for the given collapse mechanism. (20 marks)
- Q2** **Figure Q2** shows a 2-bay frame loaded with a horizontal point load at B and a vertical point load at mid-span of beam BC. Beam CD is subjected to a uniformly distributed load of 10 kN/m. Column A and E are fix supported at their ends, while column F is supported by a roller.
- Determine:
- (a) All the collapse mechanism of the beams and columns (6 marks)
- (b) Moment for each mechanism (18 marks)
- (c) Maximum moment in the frame (1 mark)
- Q3** (a) List all assumptions for Euler theory in a simply supported column. (5 marks)
- (b) Synthesis the Euler load, $P_{cr} = \frac{n^2 \pi^2 EI}{L^2}$ from column that has a pinned support at one end and a fixed support at the other end. In addition, determine the effective length l_e for the column owing to the support conditions. (20 marks)

- Q4** (a) Elaborate the main concept of stability and determinacy of a structure. (4 marks)
- (b) **Figure Q4** shows an indeterminate truss subjected to a concentrated load of P kN at point B. Point A, C and D are fixed nodes and point B is a free node. Solve the problems by using Force Method.
- (i) Sketch with appropriate scale and establish the determinate form of the truss. (5 marks)
- (ii) Develop the equation for the axial force and strain energy of the structure in equilibrium state. (4 marks)
- (iii) Define the total strain energy of the given structure. (4 marks)
- (iv) Calculate the unknown force at point B. (8 marks)
