FINAL EXAMINATION SEMESTER II SESSION 2022/2023

- COURSE NAME : FLUID MECHANICS
- COURSE CODE : BDU 11403
- PROGRAMME CODE : BDM
- EXAMINATION DATE : JULY / AUGUST 2023
- DURATION : 3 HOURS
- INSTRUCTION :
1. ANSWER **FOUR (4)** QUESTIONS ONLY.
 2. THIS FINAL EXAMINATION IS CONDUCTED VIA **CLOSED BOOK**.
 3. STUDENTS ARE **PROHIBITED** TO CONSULT THEIR OWN MATERIAL OR ANY EXTERNAL RESOURCES DURING THE EXAMINATION CONDUCTED VIA CLOSED BOOK.

THIS QUESTION PAPER CONSISTS OF **SEVEN (7)** PAGES

CONFIDENTIAL

TERBUKA

ANSWER **FOUR (4)** QUESTIONS ONLY.

- Q1** (a) Provide an explanation on the following:
- (i) Fluid statics (1 marks)
 - (ii) Cohesive Forces with one example (2 marks)
 - (iii) Adhesive Forces with one example (2 marks)
- (b) A glass tube is inserted into water at 40°C as shown in **Figure Q1 (b)** and the physical properties of water are shown in **Table Q1 (b)**. If contact angle of water with a glass surface is 0° and the water surface tension, σ is 0.0696 N/m .
- (i) Examine and plot the height, h of the water as a function of the tube's inner diameter D for $0.5 \text{ mm} \leq D \leq 3 \text{ mm}$. Use increments of 0.5 mm . (16 marks)
 - (ii) Based on the plot in **Q1 (b)(i)**, explain the relation between height and diameter of the glass tube. (4 marks)
- Q2** (a) A hydrometer is used to measure the specific gravity of the liquid. For the certain liquid, a hydrometer reading indicates a specific gravity of 1.15. Determine the density and specific weight of that liquid. (5 marks)
- (b) A piston that having a cross-sectional area of 0.07 m^2 is located in a cylinder containing water. An open U-tube manometer is connected to the cylinder as shown in **Figure Q2 (b)**. The weight of the piston is negligible.
- (i) Examine the force, P acting on the piston. Take $h_1 = 60 \text{ mm}$, $h = 100 \text{ mm}$ and density of the mercury is 13600 kg/m^3 . (16 marks)
 - (ii) Compare your answer, if the mercury is changed to water, will the similar answer of the force, P as **Q2(b)(i)** is obtained. Take the same value of h_1 and h . (4 marks)
- Q3** (a) Provide an explanation on the following:
- (i) Density (1 marks)
 - (ii) Bernoulli's Principle (2 marks)

- (b) As a designer, you are requested to choose the suitable width of the overhang sea wall along ABC which are 2 m and 5 m wide as shown in **Figure Q3(b)**. Compare the resultant force that water exerts on the overhang sea wall if the wall is 2 m and 5 m wide.
(22 marks)
- Q4 (a) As shown in **Figure Q4 (a)**, water flows out of faucet at A at 6m/s. Determine the velocity of the water just before it strikes the ground surface at B .
(5 marks)
- (b) The uniform 5 m long wooden rod in **Figure Q4 (b)** is tied to the bottom by string. The wooden rod is in equilibrium under the action of weight and buoyant forces. The physical properties of water are shown in **Table Q4 (b)**.
- (i) Analyse the string tension.
(15 marks)
- (ii) Determine the specific gravity of the wood.
(3 marks)
- (iii) Determine the inclination angle, θ .
(2 marks)
- Q5 (a) At cruise conditions of Airbus A380, air flows into a Rolls-Royce Trent 900 turbofan engine (**Figure Q5(a)**) at a steady rate of 27.22 kg/s. Fuel enters the engine at a steady rate of 0.27 kg/s. The average velocity of the exhaust gases is 452.2 m/s relative to the engine. If the engine exhaust effective cross section area is 0.325 m², determine the density of the exhaust gases in kg/m³.
(8 marks)
- (b) A free jet of fluid strikes a wedge of the total flow, a portion is deflected 30° ; the remainder is not deflected as shown in **Figure Q5(b)**. The horizontal and vertical components of force needed to hold the wedge stationary are F_H and F_V , respectively. Gravity is negligible and the fluid speed remains constants. Analyse the force ratio, F_H/F_V .
(17 marks)
