

UNIVERSITI TUN HUSSEIN ONN MALAYSIA

FINAL EXAMINATION SEMESTER I SESSION 2010/2011

COURSE NAME : **STRUCTURAL ANALYSIS**

COURSE CODE : **BFC 3023**

PROGRAMME : **3 BFF**

EXAMINATION DATE : **NOVEMBER/DECEMBER 2010**

DURATION : **3 HOURS**

INSTRUCTION : **ANSWER FOUR (4) QUESTIONS ONLY**

THIS PAPER CONSISTS OF THIRTEEN (13) PAGES

- Q1** (a) With the aid of suitable diagram, explain the relation between axial force and elongation. (3 marks)
- (b) Figure **Q1** shows a statically determinate plane truss subjected to a concentrated load of 60 kN at B to member BC. All members are made from steel with the Young's Modulus of 205 GPa and the cross sectional area is constant.
- (i) Determine all the reactions and internal member forces. (6 marks)
- (ii) Determine the displacement of joint B in the direction of the concentrated load. Use Method of Conservation Energy. (11 marks)
- (iii) If the allowable vertical displacement at point B is limited to 10 mm, determine the minimum cross sectional area for the truss. (5 marks)
- Q2** (a) List **Three (3)** advantages of redundant structures in construction. (3 marks)
- (b) Figure **Q2** shows a truss is supported by pin connection at A, and roller support at C and D. Given modulus of elasticity and cross-sectional area of each member are 200 kN/mm^2 and 400 mm^2 , respectively. Determine the
- (i) Stability and determinacy of the truss (2 marks)
- (ii) internal forces for each member by considering support C as redundant. (20 marks)
- Q3** (a) State **Five (5)** cases which cause framework to sway. (5 marks)
- (b) Figure **Q3** shows a non-sway rigid frame which pinned at A and D and fixed at C.
- (i) Calculate moment at all joints using moment distribution method. (10 marks)
- (ii) Calculate reactions at support A, C and D. (10 marks)

Q4 Figure Q4(a) shows a beam which is pinned at support A and roller at support B. The beam is subjected to a series of concentrated moving loads as shown in Figure Q4(b).

- (a) Sketch the beam's influence lines.
- (i) Reaction at A, R_A (2 marks)
- (ii) Reaction at B, R_B (2 marks)
- (iii) Shear force at section x-x, V_x (2 marks)
- (iv) Bending moment at section x-x, M_x (2 marks)
- (b) Determine the maximum values of V_x and M_x if the moving loads shown in Figure Q4(b) move from A to C. (10 marks)
- (c) Determine the absolute maximum bending moment for span AB when the moving load move along AB. (7 marks)

- Q5** (a) Calculate the plastic moment for cross section as shown in Figure Q5(a) if the yield stress of the material is 210 N/mm^2 . (10 marks)
- (b) An overhang beam is loaded with various load as shown in Figure Q5(b). Determine the plastic moment of the beam. (10 marks)
- (c) If beam in Figure Q5(b) has a cross-section in Figure Q5(a), state which part of the beam is safe. (5 marks)

- Q6** (a) With aid of sketches, list **Two (2)** failure modes of a column. (4 marks)

(b) A rigid jointed steel frame ABC carry a vertical load W as shown in Figure Q6. Derive the instability equation and find the critical load (P_{cr}) for the frame by referring to Table 1. Take $I_{AB} = 10 \times 10^6 \text{ mm}^4$ and $I_{BC} = 12 \times 10^6 \text{ mm}^4$. (18 marks)

(c) Based on your understanding, what is the elastic instability of column? (3 marks)

→

Corraction

- S1 (a) Dengan bantuan gambarajah yang sesuai, terangkan hubungan antara daya paksi dan pemanjangan. (3 markah)
- (b) Rajah Q1 menunjukkan satu kekuda satah yang boleh tentu statik dikenakan beban tumpu 60 kN di B selari dengan anggota BC. Semua anggota dibuat daripada keluli dengan Young Modulus 205 GPa dan luas keratan adalah seragam.
- (i) Tentukan semua tindakbalas dan daya dalam anggota. (6 markah)
- (ii) Tentukan pesongan di titik B sama arah dengan beban tumpu. Guna Kaedah Pengabdian Tenaga. (11 markah)
- (iii) Sekiranya pesongan pugak di titik B dihadkan kepada 10 mm, tentukan luas keratan minimum yang diperlukan untuk kekuda tersebut. (5 markah)
- S2 (a) Senaraikan Tiga (3) kelebihan struktur lebih dalam pembinaan. (3 markah)
- (b) Rajah S2 menunjukkan satu kekuda yang disokong pin di A, dan sokong pin pada C dan D. Diberi nilai modulus keanjalan dan luas keratan rentas untuk semua anggota adalah 200 kN/mm^2 dan 400 mm^2 . Tentukan,
- (i) kestabilan dan kebolontentuan kekuda tersebut. (2 markah)
- (ii) daya dalaman semua anggota dengan mengambil sokong C sebagai lebihan. (20 markah)
- S3 (a) Nyatakan Lima (5) kes yang boleh menyebabkan kerangka huyung (5 markah)
- (b) Rajah Q3 menunjukkan kerangka tidak huyung yang di sokong pin pada A dan D dan do sokong tegar pada C.
- (i) Kirakan momen bagi semua sambungan dengan menggunakan kaedah agihan momen. (10 markah)
- (ii) Kirakan tindakbalas pada sokong A,C dan D (10 markah)

S4 Rajah **Q4(a)** menunjukkan rasuk yang di sokong pin pada A dan disokong rola pada B. Rasuk tersebut di kenakan satu rangkaian beban tumpu bergerak seperti dalam Rajah **Q4(b)**.

- (a) Lakarkan garis imbas rasuk bagi
- (i) Tindakbalas A, R_A (2 markah)
 - (ii) Tindakbalas B, R_B (2 markah)
 - (iii) Daya ricih pada keratan x-x, V_x (2 markah)
 - (iv) Momen Lentur pada keratan x-x, M_x (2 markah)
- (b) Tentukan nilai V_x dan M_x maksimum sekiranya beban bergerak seperti dalam Rajah **Q4(b)** bergerak dari A hingga C. (10 markah)
- (c) Tentukan momen lentur mutlak bagi rentang AB apabila beban bergerak sepanjang rentang. (7 markah)

- S5** (a) Kira momen plastik bagi keratan rentas seperti yang ditunjukkan dalam Rajah **Q5(a)** jika tegasan alah bahan ialah 210 N/mm^2 . (10 markah)
- (b) Sebatang rasuk tergantung dikenakan beban seperti yang ditunjukkan dalam Rajah **Q5(b)**. Kira momen plastik bagi rasuk. (10 markah)
- (c) Sekiranya rasuk dalam Rajah **Q5(b)** menggunakan keratan rentas seperti dalam Rajah **Q5(a)**, nyatakan bahagian rasuk yang selamat. (5 markah)

- S6** (a) Dengan bantuan lakaran, senaraikan **Dua (2)** mod kegagalan bagi sebatang tiang.
(4 markah)
- (b) Sebuah kerangka keluli ABC terikat tegar dikenakan beban pugak F seperti yang ditunjukkan dalam Rajah Q6. Terbitkan persamaan ketidakstabilan kerangka dan tentukan beban kritikal (P_{cr}) bagi kerangka dengan merujuk Jadual 1. Ambil $I_{AC} = 10 \times 10^6 \text{ mm}^4$ dan $I_{BC} = 12 \times 10^6 \text{ mm}^4$.
(18 markah)
- (c) Berdasarkan kefahaman anda, apakah ketidakstabilan elastik bagi tiang?
(3 markah)
