

UNIVERSITI TUN HUSSEIN ONN MALAYSIA

FINAL EXAMINATION
SEMESTER II
SESSION 2016/2017

COURSE NAME : HYDRAULICS
COURSE CODE : BFC21103
PROGRAMME CODE : BFF
EXAMINATION DATE : JUNE 2017
DURATION : 3 HOURS
INSTRUCTION : ANSWER
(A) ALL QUESTIONS IN SECTION A, AND
(B) ANY TWO (2) QUESTIONS IN SECTION B

THIS QUESTION PAPER CONSISTS OF NINE (9) PAGES

SECTION A

Q1 (a) Define the following terms :

- (i) Prismatic channel
- (ii) Subcritical flow
- (iii) Hydraulic depth
- (iv) Froude number

(4 marks)

(b) **FIGURE Q1(b)** shows the water at the rate of $0.4 \text{ m}^3/\text{s}$ flows through a 1 m diameter vitrified sewer, when the sewer pipe is half full. Determine the slope of the water, if Manning coefficient n is 0.013.

(4 marks)

(c) A compound channel shown in **FIGURE Q1(c)** is used to convey $8.94 \times 10^{-1} \text{ m}^3/\text{s}$ of flow. If the channel longitudinal slope and Chezy flow resistance coefficient are $1/2000$ and 45, respectively, determine

- (i) Normal depth of flow
- (ii) State of flow based on Froude number

(12 marks)

Q2 (a) Discuss on the potential advantages of using the best hydraulic section channel.

(5 marks)

(b) A wood-lined trapezoidal channel has a side slope of 1.5(H): 2(V). Compute bottom width of the channel necessary to carry $123 \text{ m}^3/\text{s}$ of discharge at a normal depth of 1.5 m and with a bottom slope of 0.00067.

(7 marks)

(c) Design the trapezoidal channel as best hydraulic cross-section with $Q = 10 \text{ m}^3/\text{s}$, $n = 0.014$, $S_0 = 0.0004$, and $z = 3/2$ (**FIGURE Q2(c)**).

(8 marks)

Q3 (a) Briefly explain the function of control section in channel.

(2 marks)

(b) A 4.5-m wide rectangular channel is expected to discharge 50 m^3 in 10 second at water depth of 3.0 m. Analyse:

- (i) Depth of flow upstream and downstream of constriction, if width has reduced to 3.5 m.

(9 marks)

- (ii) Depth of flow at upstream, downstream and above the weir, if 3-m weir is to be proposed at the channel.

(9 marks)

SECTION B

- Q4** (a) Explain briefly **TWO (2)** applications of hydraulic jump and **TWO (2)** applications of gradually varied flow analysis.

(4 marks)

- (b) A bridge is to be built across a 11.5-m wide almost-rectangular river with bed slope of $1/850$, perimeter roughness $n = 0.06$, and discharge of $27.3 \text{ m}^3/\text{s}$. The bridge piers will cause constriction to the flow since the width of the flow will be reduced to 6.2 m. Determine

- (i) Type of flow at upstream of the constriction.

(6 marks)

- (ii) Length of the gradually-varied flow profile should it occurs upstream of the constriction. At downstream, the depth of flow rises to 3.8 m, immediately before the constriction. Use numerical integration method with $N = 3$ steps.

(10 marks)

- Q5** (a) A sluice gate is built in a 1.5 m wide rectangular channel having uniform depth of $y_0 = 0.3$ m, coefficient of discharge $C_d = 0.605$, and gate opening of $a = 0.127$ m. Hydraulic jump occurs downstream. If the depth of flow before the hydraulic jump $y_1 = 0.189$ m, calculate

- (i) Conjugate depth y_2 of the hydraulic jump.

- (ii) Discharge through the spillway.

(5 marks)

- (b) A rectangular weir with 3.3-m long and 1.6-m high is contracted at both ends ($n = 2$). If the weir is discharging water from a reservoir under a head of 0.7 m, estimate

- (i) The coefficient of discharge, C_d using Bazin formula.

(2 marks)

- (ii) The length of weir, L if a free-flowing discharge from the weir is $13.2 \text{ m}^3/\text{s}$.

(5 marks)

- (c) A rectangular spillway with 21-m wide is discharging flood flow at a rate of 260 m³/s at 1.3-m depth. Design an USBR Type III stilling basin at the toe of the spillway. (8 marks)
- Q6** (a) Explain briefly 'similarity' in model studies, and state **TWO (2)** advantages of similarity. (4 marks)
- (b) Two identical pumps installed in series are used to supply 23000 L/s of water under a head of 20 m. Given shaft power P and density of water ρ is 5000 kW and 1000 kg/m³ respectively, calculate:
- (i) Total power of water and overall efficiency of the pump. (3 marks)
 - (ii) Power of water and pressure head for single pump. (2 marks)
 - (iii) Total discharge if pumps connected in parallel. (1 mark)
- (c) Kaplan turbine is expected to produce 861 kW of power at 206 rpm with a 20 m head. A 1:5 model is designed to function under a head of 3 m. Assume overall efficiency is 80% for both model and prototype, estimate:
- (i) Rotational speed, power and discharge of model. (8 marks)
 - (ii) Specific speed for both model and prototype. (2 marks)
