**FINAL EXAMINATION
SEMESTER I
SESSION 2019/2020**

COURSE NAME : GEOMATIC ENGINEERING
COURSE CODE : BFC 20703
PROGRAMME CODE : BFF
EXAMINATION DATE : DECEMBER 2019 / JANUARY 2020
DURATION : 3 HOURS
INSTRUCTION : ANSWER ALL QUESTIONS

THIS QUESTION PAPER CONSISTS OF **SIX (6)** PAGES

CONFIDENTIAL

TERBUKA

- Q1**
- (a) Illustrate with sketch the quadrant and full circle bearing. (4 marks)
 - (b) Demonstrate the procedures of temporary adjustment for Total Station instrument. (4 marks)
 - (c) Define correctly the following terms in Geomatics engineering.
 - (i) Mean Sea Level
 - (ii) Super Elevation
 - (iii) Traverse datum
 - (iv) Class of traverse survey(8 marks)
 - (d) A map and plan is a graphical representation of a portion and characteristics of the earth's surface. Differentiate between map and plan. (4 marks)
- Q2**
- (a) Change point (CP) and staff was used to perform the levelling work from BM to TBM. List **5 (FIVE)** criteria that must be follows to reduce the error and obtains the high accuracy. (5 marks)
 - (b) Differentiate the meaning absolute height and relative height to describe the position of two points. (3 marks)
 - (c) The data from a levelling survey are shown in **Table Q2**. Use the Height of Collimation (HOC) method to calculate the data from TBM 11 (11.111 m) to TBM 13 (9.635 m). Calculate all reduce level and perform arithmetic checks to determine the accuracy acceptance. (8 marks)
 - (d) Describes advantages and disadvantages between Height of Collimation (HOC) method and Rise-and-Fall method. (4 marks)

TERBUKA

Q3 (a) **Table Q3** shows the adjusted latitude and departure for traverse line 1-2-3-4-5-1.

- (i) Determine the coordinate for station 2,3,4 and 5 (4 marks)
- (ii) Find the area of traverse. (2 marks)
- (iii) Calculate the bearing and distance for all lines. (12 marks)
- (iv) Plot the orientation of traverse without scale. (2 marks)

Q4 (a) State all the parameters in the following formulae:

- (i) $D = K s \cos^2 \theta + C \cos \theta$
- (ii) $RLa = RLb + Hi + V - ht$ (4 marks)

(b) Draw a diagram and list any **FIVE (5)** data needed to be collected during Electronic Tacheometric Surveying. (5 marks)

(c) A stadia tacheometric surveying has been conducted at Kampung Kechil. **Table Q4** shows the observation made in tacheometric survey work from station S3.

- (i) Sketch the complete diagram for the survey work. (5 marks)
- (ii) Compute the vertical distances and reduced levels of point A1, A2 and A3. (6 marks)

TERBUKA

- Q5** (a) The **Figure Q5** shows a block of land and its dimensions, in meters. The block of land is bounded on one side by a river. Measurements are taken perpendicular to the line AB to the river, at equal intervals of 50m. .
- (i) Use Trapezoidal and Simpson's rule to find an approximation to the area of block of land. (6 marks)
 - (ii) Determine estimation volumes of reclamation if the ground level needs to be raised to 1.5 meter height. (4 marks)
- (b) One circular curve with radius of 400 meter to be constructed to on new route projects. The chainage of intersection point is CH 171.574 meter and the deflection angle is $13^{\circ}00'00''$. The curve will be marked at every offset of 25 meter. Calculate the setting out data required to staking the curve with offset method by tangential angles. (10 marks)
