**FINAL EXAMINATION  
SEMESTER I  
SESSION 2015/2016**

COURSE NAME : ELECTRICAL SYSTEM DESIGN  
COURSE CODE : BEF 45303  
PROGRAMME : BACHELOR OF ELECTRICAL  
ENGINEERING WITH HONOURS  
EXAMINATION DATE : DECEMBER 2015/JANUARY 2016  
DURATION : 2 HOURS AND 30 MINUTES  
INSTRUCTION : ANSWER ALL QUESTIONS

THIS QUESTION PAPER CONSISTS OF ELEVEN (11) PAGES

**CONFIDENTIAL**

**Q1** (a) To determine maximum demand, an electrical designer has to be able to estimate diversity factors for each type of load.

(i) Explain diversity factor.

(2 marks)

(ii) Give **one (1)** example to show the importance of determining an appropriate diversity factor for a load calculation.

(3 marks)

(b) Generally, earthing can be divided into two parts, namely *system earthing* and *equipment earthing*. Describe the purpose of each earthing.

(8 marks)

(c) According to MS IEC 60038 standards, a TT (Terra-Terra) earthing system is one of the specifications in electricity supply for domestic customers.

(i) Illustrate and explain TT earthing system.

(7 marks)

(ii) Give **one (1)** advantage of TT earthing system.

(2 marks)

(iii) Identify the needs of RCD (Residual Current Device) in TT earthing system  
(3 marks)

**Q2** (a) In a plot of land with high plot ratio, it is very likely that high rise buildings will be developed by the land owner. Often, with higher structures, engineers are questioned on the *side flashes* risks.

(i) Show how a side flash can occur upon a lightning strike.

(5 marks)

(ii) Suggest **two (2)** methods to prevent side flash.

(8 marks)

(b) ELV (Extra Low Voltage) system is one of the scopes to be designed by an M&E consultant. Telephone and internet system is part of this scope. Using appropriate diagrams, show the difference in terms of installation requirement between a building with less than five floors and a building with more than five floors.

(4 marks)

(c) An SMATV (Satellite Master Antenna Television) system represents a mean for sharing the same resources among several users for satellite and terrestrial

**CONFIDENTIAL**

reception. The advanced and latest TV system available in the market is IPTV system. List down **two (2)** advantages and **two (2)** disadvantages of IPTV system.  
(8 marks)

**Q3** (a) An 18 kW load 400 V, 0.85 pf is located at 90 m from MSB. Determine the appropriate size of the un-armoured multicore PVC cable to be used for the installation. The cables are enclosed in trunking.

(8 marks)

(b) A 4-core PVC/SWA/PVC copper cable is to be installed from SSB to a 3-phase 415V motor with a full load current of 102 A and a p.f. of 0.75 lagging, along with two similar fixed to a perforated cable tray, where sheaths would be touching, as shown in **Figure Q3**. This circuit is to be protected by a BS HRC fuse. The length of cable is 100 m, with ambient temperature of 30 °C, and the voltage drop from MSB to SSB is 9 V.

(i) Recommend the rating of the fuse, which can be chosen either from 80 A, 100 A, 125 A, 160 A or 200 A.

(2 marks)

(ii) Revise the circuit with the appropriate size of cable if total voltage drop from MSB to the load is not to exceed 4%. Use **Table Q3(i)** to **Table Q3(vi)** as references for cable design.

(15 marks)

**Q4** **Figure Q4** shows a typical unit for an affordable home. As an M&E consultant, you are required to plan and design for its development.

(i) Suggest and show all power outlets and lighting point location (you may tear the sheet and attach it with your answer booklet).

(8 marks)

(ii) Calculate its TCL (Total-Connected Load) and MD (Maximum Demand).  
(10 marks)

(iii) Sketch its wiring schematic diagram, clearly showing all related information which includes MCB rating, cable size and RCD rating.

(5 marks)

(iv) If the owner of the house wants to install 1hp aircond in the master bedroom and 1.5hp aircond in the living hall, predict the size of MCB for each aircond unit.

(2 marks)

a For higher ambient temperatures, consult manufacturer.

## FINAL EXAMINATION

SEMESTER/SESSION : I/ 2015/ 2016

PROGRAMME : BEV

COURSE NAME : ELECTRICAL SYSTEM DESIGN

COURSE CODE : BEF 45303

TABLE Q3(ii)

TABLE 4C1 – Rating factors for one circuit or one multicore cable  
or for a group of circuits, or a group of multicore cables,  
to be used with current-carrying capacities of Tables 4D1A to 4J4A

| Item | Arrangement<br>(cables touching)  | Number of circuits or multicore cables |      |      |      |      |      |      |      |      |      |      |      | To be used with<br>current-carrying<br>capacities,<br>Reference<br>Method |
|------|---|--|------|------|------|------|------|------|------|------|------|------|------|---|
|      |   | 1                                      | 2    | 3    | 4    | 5    | 6    | 7    | 8    | 9    | 12   | 16   | 20   |   |
| 1.   | Bunched in air, on a surface, embedded or enclosed                              | 1.00                                   | 0.80 | 0.70 | 0.65 | 0.60 | 0.57 | 0.54 | 0.52 | 0.50 | 0.45 | 0.41 | 0.38 | A to F  |
| 2.   | Single layer on wall or floor   | 1.00                                   | 0.85 | 0.79 | 0.75 | 0.73 | 0.72 | 0.72 | 0.71 | 0.70 | 0.70 | 0.70 | 0.70 | C   |
| 3.   | Single layer multicore on a perforated horizontal or vertical cable tray system | 1.00                                   | 0.88 | 0.82 | 0.77 | 0.75 | 0.73 | 0.73 | 0.72 | 0.72 | 0.72 | 0.72 | 0.72 | E   |
| 4.   | Single layer multicore on cable ladder system or cleats etc.,                   | 1.00                                   | 0.87 | 0.82 | 0.80 | 0.80 | 0.79 | 0.79 | 0.78 | 0.78 | 0.78 | 0.78 | 0.78 |   |

NOTE 1: These factors are applicable to uniform groups of cables, equally loaded.

NOTE 2: Where horizontal clearances between adjacent cables exceed twice their overall diameter, no rating factor need be applied.

NOTE 3: The same factors are applied to:

- groups of two or three single-core cables;
- multicore cables.

NOTE 4: If a group consists of both two- and three-core cables, the total number of cables is taken as the number of circuits, and the corresponding factor is applied to the tables for two loaded conductors for the two-core cables, and to the Tables for three loaded conductors for the three-core cables.

NOTE 5: If a group consists of  $n$  single-core cables it may either be considered as  $n/2$  circuits of two loaded conductors or  $n/3$  circuits of three loaded conductors.

NOTE 6: The rating factors given have been averaged over the range of conductor sizes and types of installation included in Tables 4D1A to 4J4A and the overall accuracy of tabulated values is within 5%.

NOTE 7: For some installations and for other methods not provided for in the above table, it may be appropriate to use factors calculated for specific cases, see for example Tables 4C4 and 4C5.

NOTE 8: Where cables having differing conductor operating temperature are grouped together, the current rating is to be based upon the lowest operating temperature of any cable in the group.

NOTE 9: If, due to known operating conditions, a cable is expected to carry not more than 30 % of its *grouped* rating, it may be ignored for the purpose of obtaining the rating factor for the rest of the group.

For example, a group of  $N$  loaded cables would normally require a group rating factor of  $C_g$  applied to the tabulated  $I_L$ . However, if  $M$  cables in the group carry loads which are not greater than 0.3  $C_g I_L$  amperes the other cables can be sized by using the group rating factor corresponding to  $(N-M)$  cables.

**FINAL EXAMINATION**

SEMESTER/SESSION : I/ 2015/ 2016

COURSE NAME : ELECTRICAL SYSTEM DESIGN

PROGRAMME : BEV

COURSE CODE : BEF 45303

**UNIT FLOOR PLAN**  
**(AREA : 850 sqft, 79.00 sq meter)**

**FIGURE Q4**
