- (c) Given the Simple Price-Based Trading Systems information below

Table Q4(c): Simple Price-Based Trading Systems Information

The current price EURUSD currency pair is 1.4810, the current bar's open price is 1.4832
Key number should be calculated first. It's based on the current price. For the quotes with 4 digits after a dot the key value is the current price multiplied by 10 and then rounded. For the quotes with 2 digits after a dot the key value is the current price divided by 10 and then rounded.
Place pending Buy order at Current Price + (2 * Key value).
Place pending Sell order at Current Price - (2 * Key value).
Place stop-loss for pending Buy order at Open Price - (2 * Key value).
Place stop-loss for pending Sell order at Open Price + (2 * Key value).
Take-profit for both orders is calculated similarly to the key value but the current price should be multiplied by 100 for the quotes with 4 digits after a dot and shouldn't be divided for the quotes with 2 digits after a dot. In both cases the values should be rounded.
Trailing stop is also applied to the orders and is set to 2.5 * Key value.

Based on the table Q4(c), calculate the value for each item below

- (i) Pending Buy order level.
- (ii) Pending Sell order level.
- (iii) Stop-loss for pending Buy order.
- (iv) Stop-loss for pending Sell order.
- (v) Take-profit for all pending orders.
- (vi) Take-profit for pending Buy order.
- (vii) Take-profit for pending Sell order.
- (viii) Trailing stop for both orders.
